Anomaly Detection

Quiz, 6 questions

✔ Congratulations! You passed!

<div>Next Item</div>

1 / 1 points

1.

Which statements are true with respect to unsupervised machine learning?

---

1 / 1 points

2.

IBM DataScience Experience provides a file system underlying the jupyter notebooks of roughly 100 TeraByte for staging. Why it is not a good idea to use this as permanent data store?

---

1 / 1 points

3.

What's the input dimensionality of this layer?

```
1   model.add(LSTM(42,input_shape=(23,5),return_sequences=True))
```

---

1 / 1 points

4.

How many neurons does this layer have?

Anomaly Detection

```
1   model.add(LSTM(42,input_shape=(23,5),return_sequences=True))
```

✅ **1 / 1 points**

5.

How many future time steps does this layer predict?

```
1   model.add(LSTM(42,input_shape=(23,5),return_sequences=True))
```

✅ **1 / 1 points**

6.

Which type of neurons are the best fit for time-series data?
